Sequence 332, Application US/09598419

Patent No. 656856

GENERAL INFORMATION:

APPLICANT: Skeiky, Yasir A.W.

APPLICANT: Skeiky, Yasir A.W.

APPLICANT: Scholler, John

ITTLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121-469C6

CURRENT APPLICATION NUMBER: US/09/598,419

CURRENT FILING DATE: 2000-06-20

NUMBER OF SEQ ID NOS: 357

SOFTWARE: FastSEQ for Windows Version 3.0/4.0

SEQ ID NO 33.2

Sequence 188, Application US/09556877

Patent No. 6432916

GENERAL INFORMATION:
APPLICANT: Probst, Peter
APPLICANT: Skeiky, Yasir
APPLICANT: Fling, Steve
APPLICANT: Fling, Steve
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT AND
TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION
FILE REFERENCE: 210121.46595

CURRENT APPLICATION NUMBER: US/09/556,877

CURRENT FILING DATE: 2000-04-19

Sequence 352, Application US/09620412C

Patent No. 6448234

GENERAL INFORMATION:

APPLICANT: Steven P. Fling

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR TREATMENT AND TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

CURRENT APPLICATION NUMBER: US/09/620,412C

CURRENT FILING DATE: 2000-07-20

NUMBER OF SEQ ID NOS: 363

SOFTWARE: FastSEQ for Windows Version 3.0/4.0

SEQ ID NO 352

LENGTH: 1752
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1752

Patent No. 6448234
GENERAL INFORMATION:
TITLE OF INVENTION: DIAGNOSITIONS AND METHODS FOR
TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFE
FILE REFERENCE: 210121.4697
CURRENT APPLICATION NOWBER: US/09/620,412C
CURRENT APPLICATION NOWBER: US/09/620,412C
CURRENT FILING DATE: 2000-07-20
NUMBER OF SEQ ID NOS: 363
SOFTWARE: FastSEQ for Windows Version 3.0/4.0
SEQ ID NO 324
LENGTH: 1896
TYPE: DNA
ORGANISM: Chlamydia trachomatis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ThrLeuAlaGluGlyProProAla 128

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 333 Application US/09598419

Patent No. 6565856

GENERAL INFORMATION:

APPLICANT: Scholler, John

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND

TITLE OF INVENTION: DATE.

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121.469C6

CURRENT APPLICATION NUMBER: US/09/598,419

CURRENT FILING DATE: 2000-06-20

NUMBER OF SEQ ID NOS: 357

SOFTWARE: FactSEQ for Windows Version 3.0/4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 333, Application US/09620412C

Sequence 353, Application US/09598419
Patent No. 6565856
GENERAL INFORMATION:
APPLICANT: Skeiky, Yasir A.W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION
TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION
TITLE OF INVENTION: US/09/598,419
CURRENT APPLICATION NUMBER: US/09/598,419
CURRENT FILING DATE: 2000-06-20
NUMBER OF SEQ ID NOS: 357
SOFTMARE: FREISEQ for Windows Version 3.0/4.0
SEQ ID NO 353
LENGTH: 583
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 337, Application US/09620412C

Patent No. 6444234

GENERAL INFORMATION:

APPLICANT: Steven P. Fling

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121.469C7

CURRENT APPLICATION NUMBER: US/09/620,412C

CURRENT FILING DATE: 2000-07-20

NUMBER OF SEQ ID NOS: 363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 357, Application US/09598419

Sequence 357, Application US/09598419

Patent No. 656856

GENERAL INFORMATION:

APPLICANT: Skeiky, Yasir A.W.

APPLICANT: Skeiky, John

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND TITLE OF INVENTION: DAGNOSIS OF CHLAMYDIAL INFECTION

FILE REPREBNCE: 210121.469C6

CURRENT PILING DATE: 2000-06-20

NUMBER OF SEQ ID NOS: 357

Sequence 313, Application US/09598419

Patent No. 656356

GENERAL INFORMATION:

APPLICANT: SKELKY, Yasir A.W.

APPLICANT: SCHOLIE: John

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND

TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION

FILE REFERENCE: 210121.46.8C6

CURRENT APPLICATION NUMBER: US/09/598,419

CURRENT FILING DATE: 2000-06-20

NUMBER OF SEQ ID NOS: 357

SOFTWARE: FastSEQ for Windows Version 3.0/4.0

SEQ ID NO 313

LENGTH: 691
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 345, Application US/09620412C

Patent No. 656886
GENERAL INPORMATION:
APPLICANT: Skeiky, Yasir A.W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION TITLE REFERENCE: 210121.469C6
CURRENT FILING DATE: 2000-06-20
NUMBER OF SEQ ID NOS: 357
SOFTWARE; FREISEQ FOR Windows Version 3.0/4.0
SEQ ID NO 345
LENGTH: 700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 31, Application US/09620412C

Patent No. 656586
GENERAL INPORMATION:
APPLICANT: Skeiky, Yasir A.W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR TREATMENT AND TITLE OF INVENTION: DIAGNOSIS OF CHLAMYDIAL INFECTION
FILE REFERENCE: 210121.469C6
CURRENT APPLICATION MESSER: US/09/598,419
CURRENT FILING DATE: 2000-06-20
NUMBER OF SEQ ID NOS: 357
SOFTWARE: FRACES for Windows Version 3.0/4.0
SEQ ID NO 329
LENGTH: 715
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 653; DB 4; Length 715;
